Rules for the Fall 2021 Sale

This is the 98th All-Breed Performance Tested Bull Sale held in Southwest Missouri. Commercial and purebred buyers will have individual performance data available, along with pedigree, to select a prospective herd sire. The rules for the sale were developed by the Southwest Missouri Beef Cattle Association.

Required Performance and Conformation Information

- A. The bulls must be produced in a registered herd that is enrolled in the Missouri On-Farm Performance Testing Program and their respective breed association records program. Bulls may also qualify by being tested at an approved test station under university supervision.
- B. The bulls eligible for the 2021 Fall Sale must have been calved from December 1, 2019 and October 15, 2020.
- C. All calves in the herd available for registry must have been weighed at weaning for that season. (Herd definition: All cattle on a given farm and handled as a separate unit.)
- D. The bull calves nominated must be weighed at weaning (between 160 and 280 days of age.) They must have a 365-day weight ratio of 95% or more. If 10 or more male calves are sired by a given sire, they may be used for the season male average. The steers will be adjusted upward 5% to a bull equivalent to determine average weaning weight of male calves. (A steer is any calf castrated when weaning weights are taken.) A first time consignor may consign a bull, tested at an approved test station, to one sale, even though his entire herd was not tested.
- E. The bull's yearling weight must be taken at the associations recommended time (320 to 440 days for most breeds). He must have a 365 day weight of 1100 pounds or better and measure 49 inches or better at the hip.
- F. Bulls must rank in the 50th percentile or better for 3 of the following 6 EPD traits: Calving ease or birth weight, weaning weight, yearling weight, milk, ultrasound/carcass/intramuscular fat, and rib-eye area for non-parent bulls in the most recent sire evaluation.
- G. All weighings must be supervised by the Regional Livestock Specialist or authorized personnel.
- H. Age of dam adjustments will follow the breed associations guidelines.
- I. If the bull has been in service prior to the sale, this will be announced from the auction block.
- J. Bulls to be eligible for this sale will have to be owned as a cow-calf unit prior to the time the calf is 120 days of age. Exceptions to this rule, partnership cattle, leased herds, etc., will be determined by the sale committee prior to consignment.
- K. All bulls must be semen tested and examined for breeding soundness by a veterinarian within 30 days of sale, using standard assay analysis of semen approved by the College of Veterinary Medicine, University of Missouri.
- L. Scrotal circumference as taken by the producer's veterinarian during the breeding soundness exam will be reported sale day. Minimum circumference 33cm.
- M. All animals will be at the sale location by 1:00 p.m. day of the sale.
- N. Information not available at press time will be available sale day on supplemental sheet.
- O. All potential carriers for known genetic defects & conditions for any Angus have been tested and declared free, by Angus Breed Rules.
- P. All potential carriers for known genetic defects & conditions for any Gelbvieh have been tested and declared free, by Gelbvieh breed rules.
- Q. All potential carriers for known genetic defects for any Simmental have been tested and declared free of defect, potential carriers of genetic conditions are noted on each bull, by Simmental breed rules.
- R. Bulls must be DNA tested and have a genomic profile.
- S. The females eligible for the 2021 Fall Sale must have been calved from October 25, 2015 and October 25, 2021.
- T. Females must rank in the 50th percentile or better for 3 of the following 10 EPD traits: Calving ease, birth weight, weaning weight, yearling weight, milk, carcass weight, intramuscular fat, rib-eye area, and two breed indexes in the most recent evaluation.
- U. All cows that sell as bred and safe in calf must have a pregnancy examination within 30 days of sale and stated stage on health papers.
- V. Consignors shall furnish an official health certificate issued within 30 days of sale date. All calves old enough to be split from dams will need a separate health paper.

TERMS AND CONDITIONS

TIME: Sale begins at 7:00 p.m. October 25, 2021.

BIDDING: A floor price will be \$2250 on bulls.

TERMS: The terms of the sale are cash. Bring your personal or local bank check.

DISPUTES: The auctioneer will settle any and all disputes as to bids by declaring all bids off and reselling the animal in question.

HANDLING: Each animal will be purchaser's risk as soon as sold, but will be cared for by the owner for a reasonable period until they are loaded, free of charge to the purchaser but at his risk of loss or injury. All bulls are sold and will be paid prior to loading.

CERTIFICATES: A certificate of registry and transfer will be furnished for each animal sold by respective breeder.

BREEDING GUARANTEE: All animals of breeding age (15 months or older) at time of sale are guaranteed breeders. Bulls are guaranteed breeders if properly cared for and not used with the herd until 15 months of age. Any bull which settles at least one third of the healthy cows he breeds will be considered a breeder. Any animal that has not proven itself a breeder within six months after the sale date, if in healthy condition, and meeting the health regulations of the State of Missouri, may be returned to the farm of the seller, at the buyer's expense. The seller reserves the privilege of trying for a period of six months, to prove the animal a breeder. Should an animal fail to prove a breeder in the specified time period, the seller will refund the purchase price which shall be considered as full settlement and satisfaction of all claims. All complaints regarding breeding difficulties must be reported in writing by the buyer to the seller within six months.

ANNOUNCEMENTS: Announcements from the auction box will take precedence over the printed matter in this catalog.

CONTRACT: The above terms and guarantee shall constitute a contract between the buyer and seller of each animal sold. All bulls sell under the standard terms and conditions set forth by the respective breed association.

SALE ORDER: The bulls will sell from the oldest to the youngest. In cases of identical birth dates, the bull with the greater yearling weight will sell first. The females will sell from the oldest to the youngest. In cases of identical birth dates, the female with the greater yearling/weaning weight will sell first.

HEALTH: Bulls have been vaccinated for five strains of Lepto within 30 days of the sale. Health certificates will be furnished. Non-virgin bulls will be tested for trich.

LIABILITY: All persons who attend the sale do so at their own risk, and the sale committee and the Southwest Beef Cattle Improvement Association, and Springfield Livestock Marketing Center assume no liability, legal, or otherwise.

Expected progeny differences (EPD's) provide the best means of comparing genetic merit of animals within the breed. For each trait evaluated, the EPD incorporates the animal's individual and progeny performance with progeny performance information from other relatives. By utilizing national sire evaluation information, the evaluation also utilizes information from related traits and accounts, in part, for differences in the genetic merit of herdmates as well as genetic trends within the breed. Each trait evaluation predicts expected progeny performance relative to a fixed breed average - hence the term "Expected Progeny Difference." The key word is "difference". The EPD itself does not imply "good" or "bad" performance, only whether the performance of progeny is expected to be above or below that of another individual in that breed. EPD's are given as + or -, in this catalog. If neither a + or - is shown, that amount will be a +. Breeders should, on an individual basis, decide what is best for them by considering what traits are important to their program, their current herd performance, and the degree of change desired.

Percentile Rank - As the percentile moves toward 1, it indicates smaller birth weight EPD's and larger weaning, yearling, milk, intramuscular fat, and rib-eye area EPD's.

Accuracy - Refers to the reliability of an EPD. The closer to 1 the more reliable it is with less change likely. PE refers to pedigree estimate which averages the sire and dam EPD. BKS refers to backsolution used to obtain breeding values of non-parents by back solving from the predicted parental value.

Calving Ease EPD - This is the difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf heifers.

Birth Weight EPD - The expected difference in average birth rate (lbs) of progeny. Birth weight reflects prenatal growth potential and may also be used as an indicator of calving ease.

Maternal Milk EPD - The expected difference in average weaning rate (lbs) of daughter's calves which is attributed to milking ability. This evaluation is obtained by subtracting 1/2 of the Weaning Weight EPD (the direct effect on growth) from the Maternal Weaning Weight EPD.

Weaning Weight EPD - The expected difference in average weaning weight of calves. The evaluation reflects the genetic influence on pre-weaning growth rate.

Yearling Weight EPD - The expected difference in average yearling weight of progeny. It reflects genetic influence on both pre- weaning and post-weaning growth rate.

Carcass Weight EPD - The predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires, expressed in pounds.

Intramuscular Fat EPD - This is a predictor of the difference in a sire's progeny for % intramuscular fat or marbling in the ribeye muscle. Larger amounts favor higher carcass quality grades.

Rib-eye Area EPD - The expected difference in rib-eye area of a sire's progeny compared to the progeny of other sire's. REA is expressed in square inches.

INDEXES

The catalog lists the more important indexes on a breed basis.

Angus - (\$Wean) Considers these impact areas: birth weight, weaning weight, maternal milk and mature cow size.

Angus - (\$Beef) Considers feedlot and carcass merit. EPDs directly influencing \$B include: weaning and yearling weight, dry matter intake, as well as carcass weight, marbling, ribeye area and fat.

Angus - (\$Combined) Considers maternal, feedlot, and carcass merit. EPDs directly influencing \$C include: directly influencing a combined index: calving ease direct and maternal, weaning weight, yearling weight, maternal milk, heifer pregnancy, docility, mature cow weight, foot angle, claw set, dry matter intake, marbling, carcass weight, ribeye area and fat thickness.

MORE ON INDEXES

Gelbvieh - (\$Cow) Replacement female index that emphasis maternal productivity, stayability, reproductivity, milk, calving ease, moderate mature weight and the ability of calves to gain. Feed efficiency and carcass value are also included.

Gelbvieh - (FPI) A terminal feedlot index, that emphasis grade, yield, marbling, and carcass weight.

Simmental - (API) Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

Simmental - (TI) Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

ABBREVIATIONS

AN - Angus
AR - Red Angus
SM - Simmental
XX - Beef Crossbreeds
Hetero - Heterozygous
Homo - Homozygous
PB - Purebred
PC - Percentage

OH - Oculocutaneous Hypopigmentation Animals with OH have uniformly light colored irises coupled with an unusual chocolate coat color. This is not a lethal condition. In fact, the effects of OH seem to be mainly cosmetic. OH is a simple recessive trait meaning an animal must inherit two copies of the mutation to display the trait.

OHC - OH Carrier, has been tested and carries the OH mutation.
OHF - OH Free, has been tested and does not carry the OH mutation.
OHP - OH Potential Carrier, animal that traces to one or more confirmed tested carrier animals in its pedigree that have no intervening ancestors that have been tested free of OH.

Heifer calf born 9/02/21 Sire GAR Greater Good Reg # 19362382			
Very hard cow to sell. Her dam has been a fantastic producer. She has had 9 calves with a 375 day calving interval and a BW ratio of 95 and a WW ratio of 102. This cow is feminine and still very broody. She has a beautiful udder and a very nice heifer calf. Her calf is out of the ST Genetics sire Greater Good who has a 10 CED with a 94 WW, 167 YW and a 332 \$C set of EPD's.

Very nice young cow ready to have her second calf. She is long necked and broody. She has an excellent udder. We have a very nice group of ACCLAIM daughters who are making nice productive cows. Her dam has been one of our finest producers. She has had 6 calves with a 353 day calving interval and a 109 weaning weight ratio. WRR Real Time EPD's CED 8, WW 94, YW 168, and \$C 307.

940 is a very balanced thick deep young heifer. She will make a very broody cow. Her dam is a classy Reserve daughter. She has had 5 calves with a 376 day calving interval and a 104 weaning weight ratio. This is another Acclaim daughter that I believe will put real pounds on her calves.
